# PMC-592

Cost Effective Solution for
High-Density Multi-Circuit
Power Monitoring

Typical Applications

High-Density Branch Circuits Monitoring

BEMS Building Energy Management Systems

Cost Allocation by Virtual & Sub-Metering for Commercial Buildings

PDU Monitoring for Internet, Financial & Telecom Data Centers

LV Distribution Board Monitoring for High-Tech Manufacturing

Power Quality Monitoring

Pad-Mount Substation Demand Monitoring for Asset Management

Features Summary

- Monitor **2 Mains Circuits** and up to **84 Branch Circuits**
- Support **100A Solid-Core** and **Split-Core Branch CTs** for PDU applications
- Support **5A Solid-Core Branch CTs** for LVDB applications
- **1-Ø, 2-Ø and 3-Ø Sub-Metering**
- **Flexible configuration for 2-Ø and 3-Ø Sub-Metering Grouping**
- Support **Branch Power calculation** based on Phase or Line Voltages
- **Interval Energy Recording** for all Virtual & Sub-Meters
- **Programmable Data Recording** for Real-Time Parameters
- **1GB Non-Volatile Log Memory**

- **Dip/Swell Monitoring** with **Waveform Recording** based on IEC 61000-4-30
- Digital Inputs for **Status Monitoring**
- Digital Outputs for **Control and Alarming**
- RTD Inputs for Hot & Cold Isle **Temperature Monitoring**
- **Modbus** RTU/TCP and **SNMP Protocol** Support
- **Embedded Web Interface** for complete data access and configuration
- Optional support for up to two **7" Touch-Screen HMIs** per PMC-592
- A single PMC-592 can be used to **monitor two PDUs**, each with one Mains and 42 Branch Circuits

PMC-592
At-A-Glance

Base Unit
2xMains Inputs, each with 3-phase Voltages and 4-phase Currents
Up to 4 CT Branches with a maximum 21 CTs per Branch
2xDI, 2xRO, 2xRTD Inputs
1xRS-422/485 & 1xRS-485 with Modbus RTU
1x100BaseT with Modbus TCP and SNMP
Power Supply: 95-277VAC/VDC ± 10%, 47-440 Hz
Burden: <5W

Optional HMI
7" Color Touch-Screen TFT
LCD with LED Backlight
Power Supply: 24VDC ± 20%
Burden: <10W

CT Strip
Up to 4 Branch Circuits
with 3/4" or 1" CT spacing

Option I:
   12x100A or 21x100A Solid-Core
   100A maximum
   Starting Current: 100mA
   Overload: 500A for 1s
   Burden: < 0.5VA per phase
Option II:
   12x5A or 21x5A Solid-Core CTs
   5A nominal, 10A maximum
   Programmable CT Ratio: 400 maximum
   Starting Current: 10mA
   Overload: 100A for 1s
   Burden: < 0.5VA per phase

Branch Split Core CT
For retrofit applications
100A maximum
Starting Current: 100mA
Overload: 500A for 1s
Burden: < 0.5VA per phase

Branch Circuit Cable
High Quality, Rugged and Reliable
Cable Length: 0.4m, 1.8m, 6m, 10m

Adapter Board
Split-Core CT Adapter Board
to simplify wiring termination

Optional HMI

**PMC-592 in a typical PDU Panel with one Mains and 42 Branch Circuits**

Features

Mains Measurements

The PMC-592 features high-accuracy measurements for two Mains Inputs, each supporting 3 Voltage and 4 Current Inputs with the following measurements
- VLN and VLL per phase and average
- I per phase and average, measured Neutral Current
- kW, kvar, kVA, PF per phase and total
- Frequency
- Loading Factor per phase and average
- kWh Import/Export, kvarh Import/Export, kVAh Total
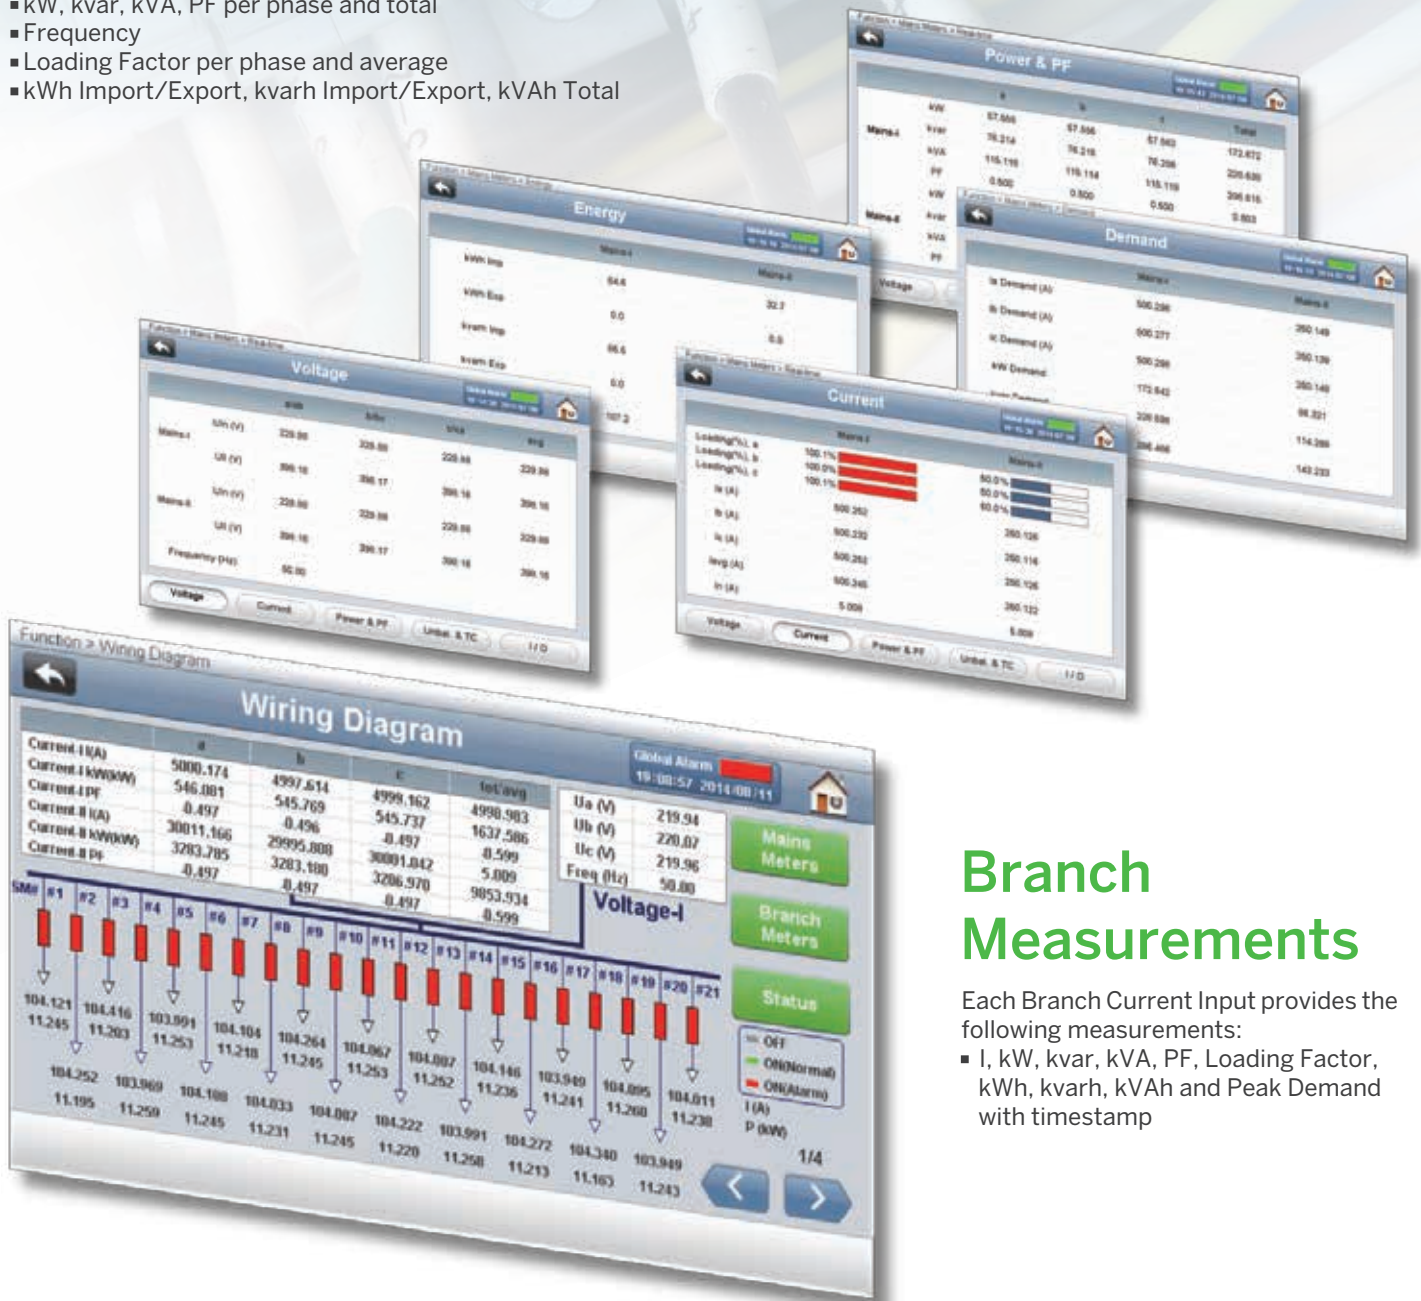

Branch Measurements

Each Branch Current Input provides the following measurements:
- I, kW, kvar, kVA, PF, Loading Factor, kWh, kvarh, kVAh and Peak Demand with timestamp

Billing and Cost Allocation

PMC-592 can be used to monitor energy usage for individual tenants, departments, pieces of equipment or other loads to account for their actual energy usage

Sub-Meters

Each Sub-Meter (1-Ø, 2-Ø and 3-Ø) provides the following information
- I Average, Loading Factor, kW, kvar, kVA, PF Total, and their respective Max/Min values
- kWh Import, kvarh Import and kVAh
- Demand values for I Average, kW, kvar and kVA
- Peak Demands with timestamp for This Month and Last Month (or Before Last Reset and Since Last Reset)
- Historical Peak Demands
Virtual Meters

- 10 Virtual Meters are available for the arbitrary aggregation of energy consumption from the specified Sub-Meters
- Each Virtual Meter provides aggregated values for kW , kWh, kvarh and kVAh

Power Quality

The growing use of switch-mode power supplies, VSDs/VFDs, electronic ballasts, LED lightings and Inverter AC has made us aware of the effects of harmonics, which in turn cause control malfunction, capacitor failure, motor overheating and the overloading of neutral conductor.

Equipment and machinery can be damaged or even fail when subjected to power quality anomalies. Short-duration voltage dips or surges can bring businesses down for hours or days.

Not only can the PMC-592 help detect voltage dips/swells, measure individual harmonics as well as record high-resolution waveforms on the Mains Inputs, it can also measure THD on Branch Circuits and provide insights for potential problem sources.

$$THD_V = \frac{\sqrt{\sum_{n=2} V_n^2}}{V_1}$$

$$THD_I = \frac{\sqrt{\sum_{n=2} I_n^2}}{I_1}$$

Mains
- V and I Unbalance based on Sequence Components
- THD, TOHD, TEHD and Individual harmonics to 31st
- TDD and Crest Factor

Waveform Recorder for Mains Inputs
- Programmable resolutions (samples/ cycle x # of cycles) at 64x150, 64x75, 32x300, 32x150, 16x600 and 16x300
- Triggered by the following alarms: Dip, Swell and Interruption

Branch Circuits
- Current THD per Branch Circuit

Interval Energy and Programmable Data Recording

Collect actionable energy information for pattern analysis, process control, load shifting to avoid demand charges, building performance optimization as well as efficiency management.

1GB Non-Volatile Log Memory

Interval Energy Recorder

- Complete energy profiling of the two Mains, 1-Ø, 2-Ø and 3-Ø Sub-Meters as well as Virtual Meters
- Mains: kWh Import/Export, kvarh Import/Export and kVAh
- Sub-Meters and Virtual Meters: kWh Import, kvarh Import and kVAh
- Programmable Interval at 5, 10, 15, 30 or 60 minute intervals
- Fixed Log Depth at 10,000 entries, enough to record:
    - a. 1 month @ 5-minute
    - b. 2 months @ 10-minute
    - c. 3 months @ 15-minute
    - d. 6 months @ 30-minute
    - e. 12 months @ 60-minute

Programmable Data Recorders

- 10 Recorders of 64 parameters each
- Real-time parameter recording for trend analysis
- Programmable Log Depth: 65535 max.

Monitoring and Control

The PMC-592 provides Digital I/Os for status monitoring, control, alarming as well as temperature monitoring. These signals can also be integrated into BAS for building automation.

Temperature Monitoring

- 2 Channels for PT100 sensor (sensor not included)
- Range from -40 to 200 °C
- Hot and Cold Isle monitoring

Digital Inputs

- External status monitoring with programmable de-bounce
- 2 Channels, volts free dry contact, 24VDC internally wetted

Digital Outputs

- 2 Channels for external control and alarm
- 5A @ 250VAC/30VDC
- Facilitates Setpoint Control

SOE Log & Alarm Monitoring

The PMC-592 provides powerful alarming functions for the Mains and Branch Inputs as well as for different parameters. It supports 4 Alarm Levels (High-High, High, Low and Low-Low) to raise awareness and help differentiate critical conditions.

- Configurable Threshold and Time Delay for each circuit

- Alarm Summary At-A-Glance

- Global Alarm Output

- 4 Alarm Levels: HH, H, L and LL

- All alarms are recorded in the SOE Log
- 1000 events time-stamped to ±1ms resolution

Communications and Protocols

Port 1 - RS-485/422, Port 2 - RS-485

- Optically isolated
- 1200 to 38,400 bps
- Modbus RTU
- Support up to two HMIs simultaneously

Port 3 - Ethernet

- 10/100BaseT
- Modbus TCP
- HTTP, SMTP, SNTP, SNMP

Flexible Configuration

PMC-592 is designed to facilitate flexible installation in a compact and high-density environment with programmable CT Ratio and Polarity, Phase or Line Reference Voltage, 2-Ø and 3-Ø Sub-Meter Grouping, CT Strip Installation Mode and Orientation as well as the following features to make site installation a breeze.

Installation with SCCTs

Installation with CT Strip

- Flexible Configuration of CT Ratio and Polarity Facilitates Site Installation

- Support common panel arrangements such as Single Panel Mode, Dual Panel Mode and 1-Phase 3-Wire configuration

- A single PMC-592 can be used to monitor two PDUs, each with one Mains and 42 Branch Circuits

- Any Branch Current Input can be paired with any Phase or Line Voltage

- Flexible configuration for 2-Ø and 3-Ø Sub-Meter Grouping to eliminate wiring mistakes at site that would cause the complete breakdown of sub-meter calculations due to rigid ordering for 2-Ø and 3-Ø Sub-Meter wiring offered by other competitors.
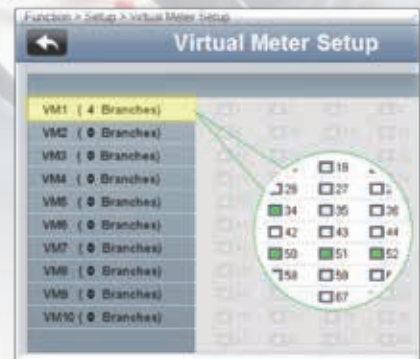

System Integration

Not only can the PMC-592 be used as a stand-alone piece of intelligent equipment with its on-board Web Interface, optional Touch-Screen Color HMI and the free Log Viewer software for the Interval Energy and Data Recorders, it can also be easily integrated with CET's PecStar® iEMS and iEEM as well as other EMS, BMS, SCADA or Management systems via Modbus RTU/TCP and SNMP.

Accuracy

Parameters	Accuracy	Resolution
Mains Voltage	± 0.5%	0.01V
Mains I1 - I4	± 0.5%	0.001A
kW, kvar, kVA	IEC 62053-21 Class 1	0.001k
kWh, kVAh	IEC 62053-21 Class 1	0.01kXh
kvarh	IEC 62053-23 Class 2	0.01kvarh
P.F.	1%	0.001
Frequency	± 0.01 Hz	0.01Hz
Harmonics	IEC 61000-4-7 / 30 Class B	0.01%
K-Factor	IEC 61000-4-7 / 30 Class B	0.1
RTD	± 1°	0.1°

Standard of Compliance

Safety Requirements

LVD Directive 2006 / 95 / EC	EN61010-1-1-2001
Insulation	IEC 60255-5-2000
Dielectric Test	2kV @ 1 minute, 50/60Hz
Insulation Resistance	>100MΩ
Impulse Voltage	5kV, 1.2/50μs

EMC Compatibility
EMC Directive 2004/108/EC
(EN 61326: 2006)

Environmental and Mechanical Specification

Environmental Conditions

Operating Temp.	-25°C to 70°C
Storage Temp.	-40°C to 85°C
Humidity	5% to 95% non-condensing
Atmospheric Pressure	70 kPa to 106 kPa
Pollution Degree	II
Installation Category	CAT III

Mechanical Characteristics

Enclosure	Galvanized Steel
Unit Dimensions	260.5*154*55.5
IP Rating	20
